

Novo lice Slatine

Grad Slatina

NEW FACE

of

SLATINA CITY

Dear fellow citizens,

The City of Slatina achieved its development objectives by rapid tempo, defining, at the same time, the new values for its quick step forward in a time ahead.

Economic development of the City of Slatina is associated, primarily, with natural resources, tradition and stimulating environment that has a beneficial effect on the development of existing and emergence of new economic activities.

By investment and construction of enterprise zones, new roads, water supply, sewage and gas networks, and other municipal infrastructure, with the existing natural resources and economic activities, we create prerequisites for the development of entrepreneurship and the arrival of strategic partners and investors.

By realization and the implementation of a number of capital projects over the past three years, while planning new projects, not only in the economy, but also in education and culture, we will achieve our goal of improving conditions of life of all citizens, entitled as "New face of Slatina.

Confirmation that we go right through is the fact, that in the last three years investments made by the Town, State and Entrepreneurs in infrastructure and capital facilities exceed 450 million Kuna. The value of contracted investments - projects that are underway, of City of Slatina, States and Entrepreneurs, is more than 550 million Kuna.

Opening doors to all who wish to realize their ideas and find their business interest, we open the possibility of faster economic development and dynamic business cooperation.

Dear fellow citizens, regardless of the current world financial crisis and recession trends, our optimism is not rocky, but on the contrary, this situation is motivated.

With a call to your active participation and support for our common goals with determination and conviction that solutions always exist, let's make Slatina even prettier and more positive for life, for all of us and the generations to come. Let us share together the satisfaction of opening new schools, sports halls, new industrial zones, new accommodation, and above all, new jobs.

Slatina exists thanks to the courage and perseverance of all of their generation to whom we appreciate for their creative spirit and faith for a better tomorrow. With the same gear and determination, we go further together, with faith in our own strength and cohesion.

We hope that with this brochure we are able to give you an insight into the work and projects conducted in the town of Slatina.

Mayor
Ivan Roštaš, prof

The Slatina City area is located in the eastern part of Virovitica-Podravina County, with an area of 784 km². In the north is bounded by the river Drava, on the southern with reefs of Papuk, in the East there is a wide open eastern Croatian plain and on the west by Podravina. Podravina - Slatina area is administratively-territorially divided into five municipalities (Čadavica, Mikleuš Nova Bukovica, Sopje and Voćin) and the City of Slatina.

With fourteen suburb settlements (Bakić, Bistrica, Donji Meljani, Golenić, Ivanbrijeg, Kozice, Lukavac, Medinci, Markovo, Novi Senkovac, Radosavci, Sladojevci, Sladojevački Lug and Gornji Miholjac) the surface of the City area totals 156 square kilometers. Slatina by many of its characteristics has the central role in the region. By special Decision of Parliament of the Republic of Croatia Slatina received in the year 1992 the City-status.

The special mark of the area is its natural zonal stretch which reflects on the economic evaluation and the role of Slatina.

Relief area is characterized by two different entities. The northern part, Podravska valley is the lowland part, where See level ranges from 100 to 120 m. Moving from north to south, the terrain crosses to the hilly mountains, with see level up to 1000 m.

Mountainous highlands, extends in the direction of NW - SE and is abundant with creek valleys. The transport connectivity of the town is reduced because of existence of the state border and the river Drava in the north and the mountain Papuk and Bilogora on the south side. The main roads are stretching from east to the west.

Climatic conditions are under influence of the circulation of cold polar and warm tropical air masses, with the consequence of frequent and intense weather changes. Average annual air temperature (for the period from 1995-2004) is 11 C.

Average annual temperature amplitude is 20.5 C, which is in favor of continental climatic category. During the year, there are minimum average temperatures of 14 C recorded.

The summers are usually very hot with the highest temperatures of 34 C.

SUMMARY OF BASIC DATA

Area: 156 km²

Agricultural land: 5.043,81 hectares

Area under forest: 200 ha

Number of settlements: Slatina and 14 suburb villages

Villages of special state interests:

Ivanbrijeg, Golenić and Lukavac

Population: 14.819

Active Population: 6.177

Agricultural population: 816

Number of active trades: 387

Number of companies: 161

The annual precipitation is mostly allocated in two months, with peaks in June and September. For the period 1995- 2004 the annual average precipitation is 815 mm, which indicates that this area has more humidity comparing with others. This area is not characterized by strong winds, mostly 1.2 and 3 before, and the most common directions are SW, NW, SE and N.
